Wikibooks is a useful resource if you're curious about a subject, but you couldn't reference it in academic work. It's also worth noting that although Wikibooks' editors are sharp-eyed, some less scrupulous contributors may plagiarize copyright-protected work by other authors. Some recipes, for example, appear to be paraphrased from well-known chefs.

With credit spreads, the ultimate goal is to keep as much of the premium as possible instead of speculating on market direction. The ideal environment for the credit spread seller is for the underlying asset to move lower or stay at the current price level without moving higher; so that the option that was sold can expire and the premium that was collected can be kept without any type of obligation on the part of the seller.

A credit spread basically consists of combining a short position on options which are in the money or at the money together with a long position on options that are out of the money. By using some of the funds received from taking the short position on adopting the opposing long position, you are limiting the risk you are exposed to.

## **Credit Spread Definition - investopedia.com**

Credit spreads, or net credit spreads, are spread strategies that involve net receipts of premiums, whereas debit spreads involve net payments of premiums.

## **Credit Spread vs. Debit Spread: What's the Difference?**

With a credit spread, the money is credited to your account at the start of the trade. This strategy was designed to make a profit when the spreads between the two options narrows. Credit spreads can be bullish or bearish. As a result, you need to make sure you choose the correct direction when you're trading credit spreads for a living.

## **Trading Credit Spreads for a Living & How to Get Started**

The breakeven price of a call credit spread is the short call's strike price plus the credit received. In this case, that's \$102 (Short Call Strike Price = \$100; Entry Credit = \$2.00). That's because if the stock price is at \$102 at expiration, the 100 call will be worth \$2.00 while the 105 call will be worthless, which means the value of the spread will be \$2.00.
