William H. Harris, is an American orthopaedic surgeon, Founder and Director Emeritus of the Massachusetts General Hospital Harris Orthopaedics Laboratory, and creator of the Advances in Arthroplasty course held annually since 1970. Much of Harris' research focuses on osteolysis, the deterioration of bone tissue around joint replacement implants, and developing highly cross-linked polyethylene to counter the issue of osteolysis. Fifteen years of wide spread use of highly cross-linked polyethylene

William H. Harris (orthopaedic surgeon) - Wikipedia

Postoperative dislocation is a devastating complication of total hip arthroplasty (THA). Patients with ankylosing spondylitis (AS) or a history of spinal fusion (SF) are among the populations at higher risk, and their greater rate of dislocation has been attributed to spinopelvic immobility.

Dislocation After THA Higher in Patients with Spinal ...
