To solve a literal equation, you need to solve for a determined variable by using algebra to isolate it. You will often need to do this when rearranging geometric formulas or when solving linear equations. In order to solve literal equations, use the same algebraic principles you would use to solve linear

$2w$ for l . So this right here, this is just the formula for the perimeter of a rectangle. Perimeter is equal to 2 times the length plus 2 times the width. But they just want us to solve this equation right here, solve for l . So let's do that. So we have P is equal to 2 times l plus 2 times w . So we need to solve for l .
